EVERY YEAR A NUMBER OF DEATHS AND INJURIES IN UK HOMES ARE CAUSED BY FAULTY ELECTRICS AND ELECTRICAL EQUIPMENT

Almost nine out of ten electrical fires are caused by products, either through misuse or faults.

The last few years have seen an increase in the number of counterfeit and sub-standard electrical products on the market. Hair styling products, mobile phone chargers and electronic games are among the top electrical fakes.

Counterfeit electrical goods almost always contain incorrect or faulty parts that can overheat or break just days after purchase, increasing the risk of fire or electric shock.

Many people see cheap electrical goods as a bargain but if the product does turn out to be fake these goods are, at best, a waste of money. At worst, they could result in a house fire, severe injury or even the death of a loved one. The increase in the popularity of online shopping makes it even easier

for dodgy goods to slip through the net. The best way to protect yourself from substandard and counterfeit goods is to buy your electrical products from reputable retailers, on the high street or via their websites.

However, there are precautions you can take when buying from less well-known sellers.

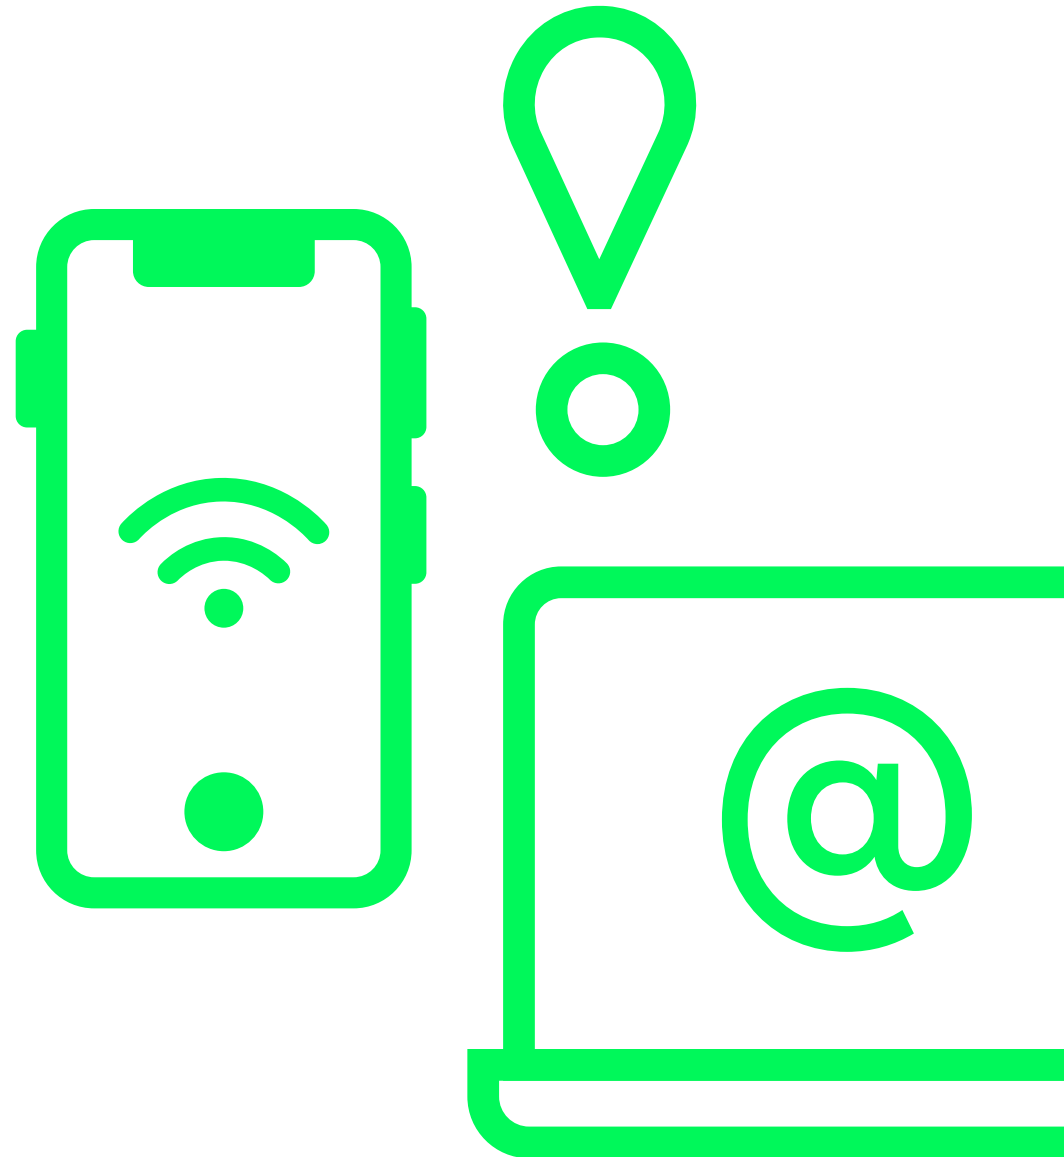

This guide will help you to look out for the most common problems with buying electrical products online, and make you aware of your rights.

SHOPPING ONLINE

FOLLOW OUR TOP TEN TIPS

1

- Check the voltage of products is 230V, 50Hz (the UK's usual domestic voltage) and that they are fitted with a standard UK plug (with a fuse), charger with UK plug pins or a conversion plug (with a fuse). Not a travel adaptor.
- Look for the seller's contact details. Make sure there is a full address and not just a PO Box number. Not all websites with a .co.uk address are based in the UK.
- If you are considering buying second hand, stick to reputable charity stores. Although some independent third-party sellers may check the safety of goods they sell on privately, there is no guarantee any such check will have taken place. By going to well-known charity stores with formal processes in place for checking goods, such as the British Heart Foundation, consumers can be confident that electrical goods are checked before being sold to the public. Ensure that you ask the charity store about their processes before buying.
- Do a price check and, if you have time, visit the high street too. If a bargain looks too good to be true, the chances are it probably is.
- Use online review websites to find out what people are saying about products and sellers.
- Read the product guarantees, sellers' terms and conditions, returns policies and privacy statements.
- If you use your credit card to spend £100 or more on an item, you can hold both the trader and credit card company liable if something goes wrong with the sale.
- Keep records of anything you order.

DON'T FALL FOR FAKE

2

Increasingly, fake products are sold online, often at “unbelievable” prices. If in doubt, email the seller with questions and ask for more pictures of the product so that you can do a visual check.

BEFORE YOU BUY, CHECK

- Is the item much cheaper than you expected? (Although a clever counterfeiter can also copy the price!)
- Do website photos of the product and its packaging look genuine?
- Does the site offer information about user instructions and guarantees?
- Are the manufacturer’s contact details, and/or the product’s country of origin, provided on the site?

BUYING GOODS SECOND-HAND

If you must buy second-hand electrical products, try to buy from a business seller you know and trust. You still have some legal protection, as businesses selling second-hand electrical goods must ensure that the product meets legal safety requirements and is correctly labelled.

If you are buying from a private seller in an online auction, the seller’s only obligation is to accurately describe the item being sold. They can refuse responsibility for the quality of the product.

STEER CLEAR OF SPAM

Spam emails often try to lure you to certain websites. If you order from one of these, the chances are you will get fake goods, that is if you get anything at all.

Don't rely on a CE or UKCA marks alone as a guarantee of safety. These marks on a product are simply a declaration by the manufacturer that the product meets all the requirements of European and UK law and is safe to use. It can also be faked!

PROBLEM PRODUCTS

3

Returning a recalled product is not always convenient, but it is worth it when you bear in mind that faulty products can cause a serious electric shock or fire. But do you know if any of the products in your home have been recalled?

RECALL INFORMATION SHOWS ELECTRICAL GOODS COMMONLY REPORTED AS FAULTY OR DANGEROUS INCLUDE:

- Electrical chargers.
- Adaptors, including those used for travel.
- Extension and spare product leads.
- Hairdryers, tongs and straighteners.
- Small kitchen appliances like kettles, toasters and irons.
- White goods (e.g. washing machines, tumble dryers, fridge/freezers, ovens).

Typically, the average success rate of an electrical product recall in the UK is just 10-20%. This means that there are potentially millions of recalled electrical items still in UK homes. As most of these products have been recalled because they offer a risk of electric shock or electrical fire, they present a serious risk.

Visit <https://www.gov.uk/product-safety-alerts-reports-recalls> to check the electrical products in your home.

If you suspect a product is dangerous to use, or that it is a fake copy of a well-known brand, you should contact your local Trading Standards office or Citizens Advice straight away. If you have any suspicions about the product's safety, or if you think it's a fake, do not use it.

WHEN YOUR PRODUCT ARRIVES

4

If you have ordered an electrical product online, carry out some basic checks before you start to use it.

IF SOMETHING SEEMS WRONG:

Check that the packaging and delivery notes look genuine. Does the package contain instructions and a guarantee?

Check for any damage and listen for loose fittings.

Plug checker guides can be purchased from Electrical Safety First here:

Check the item is fitted with a standard UK plug (with a fuse), charger with UK plug pins or a conversion plug (with a fuse), not a travel adaptor. Make sure it is in good condition with the right size pins and properly attached to the cord.

STOP USING THE PRODUCT IMMEDIATELY, TURN IT OFF AND UNPLUG IT FROM THE SOCKET IF ANY OF THE FOLLOWING HAPPENS:

- It isn't working properly or won't work all the time.
- It speeds up or down without warning.
- The outer casing seems too hot to the touch.
- You can see smoke coming from it, or smell burning.

RETURNING FAULTY PRODUCTS

5

If you believe that a product is faulty, you should first contact the seller. Put your complaint in writing and keep copies of any correspondence.

IF YOU ARE NOT SATISFIED WITH THE RESPONSE, THERE ARE A NUMBER OF THINGS YOU CAN DO.

- If you are making a claim for a refund, repair or replacement, you can take advice from Citizens Advice.
- Some auction websites or third party bodies (e.g. PayPal, Klarna etc.) can help – see their terms and conditions.
- Contact your local council and ask to speak to their trading standards department.
- If the product cost more than £100 and you paid by credit card, contact your credit card company. They may refund you and take up your complaint with the seller.

- Contact the manufacturer directly and speak to their customer services team – but remember, you still need to go through the seller for a refund.
- If the seller is a member of a trade association, or an online accreditation body, you can ask them to look into your complaint.
- A last resort is to take the seller to court, which may cost you money. If you win, your court costs will be paid. However, if you lose, you will have to pay the seller's legal bill as well as your own.

Contact details for the organisations mentioned above can be found at the end of this leaflet.

KNOW YOUR RIGHTS

BUYING FROM UK COMPANIES

6

Online buyers have protection in law against unfair trading through the Consumer Rights Act (CRA) 2015 and The Consumer Contracts (Amendment) Regulations 2015.

THE MAIN POINTS TO REMEMBER ARE:

- Goods must be as described, fit for purpose and of satisfactory quality.
- You have a “cooling off” period of 14 days i.e. in most cases, you can change your mind and get a full refund up to 14 days after receiving your goods.
- If your goods are faulty, you can get a refund up to 30 days after receiving your goods
- You have the right to a repair, replacement or, if it can't be repaired or replaced, a full refund (for up to six months after purchase)
- If the goods do not last a reasonable length of time you may be entitled to some money back (for up to 6 years after purchase)
- If you buy a second-hand product from a business, you are still legally protected by the same regulations i.e. you still have the right to return faulty or misrepresented goods, and they must ensure they are correctly described including any faults. However, wear and tear has to be taken into consideration
- If you buy a second-hand product from a private seller, you have less protection. A private seller cannot misrepresent goods but there is also no obligation to disclose all faults.

KNOW YOUR RIGHTS

BUYING FROM COMPANIES OUTSIDE THE UK

7

If you buy an electrical product from a company based outside the UK, it may take time to sort out your complaint. Contact the UK International Consumer Centre at ukecc.net for more details, or contact Citizens Advice.

If you buy from a company outside the UK or EU and have a problem, it is unlikely that UK or EU law can protect you.

ALSO, BEAR IN MIND THAT:

- Electrical goods may not meet UK or EU safety and quality standards.
- The product you receive may work on a different voltage rating from that in the UK.
- As well as delivery charges, you will have to pay Customs and Excise duties before the goods are delivered to your home.
- If you need to return a product, you will probably have to pay the postage. You will also need to complete a Customs and Excise form to get a refund on duty taxes.

Remember that any business can use a .co.uk domain, regardless of their location or nationality.
